Product Dissection for Flipkart

Company overview:

Flipkart was founded in October 2007 by Sachin Bansal and Binny Bansal. It was first started as online platform for book selling but slowly it became leading e-commerce platform. It is now becoming part of our daily life either we need grocery or any electronic material or any stationary item or anything we could imagine in our daily life. With its engaging features and attractive dashboard, there are millions of people who are using it in their daily life according to their needs.

Real word problems solved by Flipkart:

Flipkart solved many real word problems like problems of people by delivering their orders and daily needed item at right time and at their desired place at better price and also helping delivery partners by giving them employment. Flipkart connected sellers and customers beyond their reach. For example- People sitting in Kashmir can orders their desired product from seller who is in Kanyakumari in just one click.

Flipkart have many engaging fetchers like ‘Wishlist’, ‘Cart’, ‘Reward’, ‘Gift card’, ‘Categories’, ‘Discount’ etc. We can add our desired product in Cart and we if we need that product in future, we can add that product in Wishlist. There are many attractive

gift card and reward for customers to attract them to use the platform. There are also Discount available which make our shopping cost effective and also help us to save money.

In conclusion, Flipkart is solving many real-world problems by making the app easier to use for every age of people either for teen ages or mid ages or older people. Everyon can use it smoothly.

Case Study: Real-World Problems and Flipkart's Innovative Solutions

Flipkart is leading E-commerce company. Its current net worth is almost $40 billion. Flipkart's innovative and creative ideas are helping them to make its relevance in current scenario. There are many downfalls but their management team always show courage and make Flipkart strong so that it can fight with others. There are many challenges and Flipkart always manages to solve them.

Problem 1: Availability of necessary goods

Real-World Challenge: There are many few places are in urban areas where you get all goods of your necessity and no place in rural areas where we get all necessary goods at one place.

Flipkart solution: Flipkart is helping people to get their all-necessary goods at one place by giving them a simple platform. Flipkart is helping urban people by delivering their goods at their places and specially helping rural people after expansion of internet in rural areas. Now a man/women can buy any good which he/she wants to use without going anywhere specially for the people who went for shopping in town before.

Problem 2: By connecting seller and customers across different cities

Real-World Challenge: Earlier there was monopoly of local sellers. Local sellers sell their goods on their on rate which was big issue specially in rural areas. There was very less connectivity between rural sellers and urban customers.

Flipkart solution: Flipkart start connecting sellers and customers across the country by their platform. Sellers of any city can connect customers of any city which is unique features of

flipkart. Seller of Kashmir can connect to customers to Kerala very easily which is very hard earlier.

Problem 3: No support to local goods

Real-World Challenge: There was no promotion of local goods by any other platform earlier. There was very less connectivity of cultural goods with customers of other state. People got connected with local goods only after going there.

Flipkart solution: Flipkart connected local and small sellers with customers of all over India and also internationally. For ex- Famous Kolhapuri chappal of Maharashtra can be accessed by any person who can't go Maharashtra. So, it is very easy to get connected with any cultural goods across India.

Problem 4: High costing of necessary goods

Real-World Challenge: There is high price of items which are in high demand in city or villages. Sellers changes their rate accordingly with any reason. Prices are in the hand of sellers completely. Then sell their goods even higher rate MRP.

Flipkart solution: Flipkart solve this problem by giving attractive discount to customers on their platform. Flipkart provide affordable price to all goods and people get that item at their desired place without going anywhere else at very effective pricing.

Top Features of Flipkart:

I. **Delivery at desired place –** After ordering flipkart, people get their order on their desired place by delivery boy. It is important feature of flipkart especially for older age group people and physically handicap persons.

II. **Attractive offers-** There any many attractive discount available for customers on different categories which make product cheaper and cost effective. So, people can get products at very cheap rates.
